

# Swiss Digital Network and Kosli, announce partnership to spearhead technology innovation in the Swiss financial sector.

Press Release

## Swiss Digital Network and Kosli announce partnership

Swiss Digital Network and Kosli announce partnership and expertise to fully support Swiss organizations integrating Continuous Compliance into Effective Continuous Verification, a key capability of the Digital Highway: Swiss Digital Network blueprint for high-velocity and regulated DevOps environments.

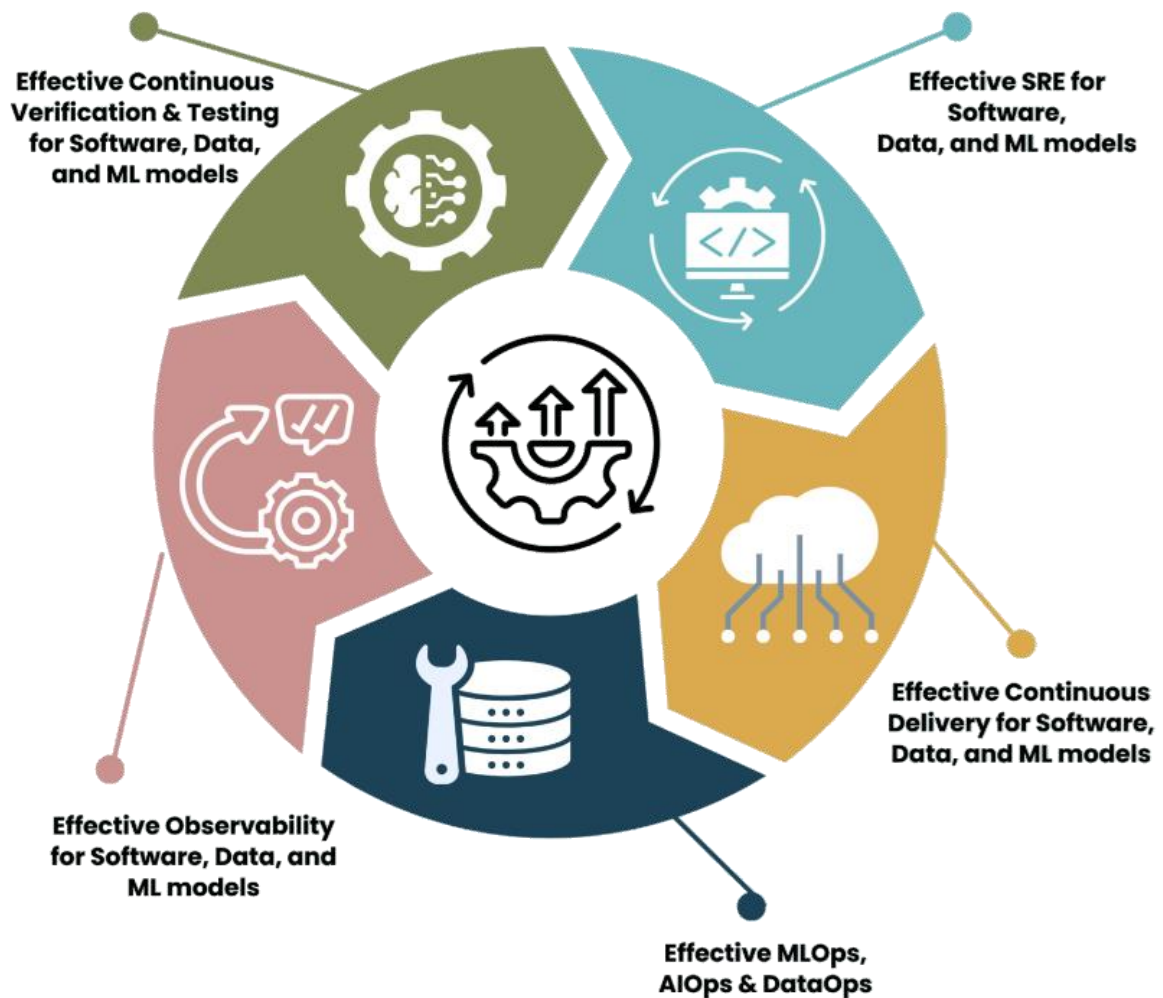

---

### FOR IMMEDIATE RELEASE

**Zürich - May 14th 24** - Swiss Digital Network (SDN) and Kosli are pleased to announce they have entered a strategic partnership, combining Kosli Continuous Compliance Solutions with SDN's Digital Highway blueprint, Consulting & Training Services around Continuous Verification and pipeline-driven Testing.

With DevOps pipelines playing an increasingly critical role in high-velocity Software delivery and agile business, companies recognize the need for a holistic transformation approach covering Technology, Operations, and Culture to embed resiliency and test engineering into the continuous and automated Software delivery.

This partnership brings together deep and complementary skills to accelerate the implementation of Effective Continuous Verification, including Compliance verification, for Swiss Organizations. Together, Swiss Digital Network and Kosli will support Swiss companies and teams adopting Effective Continuous Verification driven by state-of-the-art automation capabilities related to quality gates verification and Change tracking in DevOps environments.

### Combining Kosli Continuous Compliance Solutions with SDN's Digital Highway Capabilities

*“The Swiss Digital Network-Kosli partnership is a powerful combination. Swiss Digital Network's expertise in essential digital transformation capabilities around the Digital Highway, the niche focus of their cells specialized in Continuous Verification, SRE, MLOps, and Transformation Consulting are uniquely complimentary to Kosli's technology,”* said Mike Long, CEO and Co-Founder of Kosli.

*“We have successfully deployed the Kosli technology in large enterprise environments, enabling our customers to automate compliance verification and track changes in DevOps and high-regulated environments. Continuous Compliance for DevOps is key to our customers to embed compliance and governance verification into their DevOps pipelines. It requires a certain level of Maturity regarding Continuous Verification, Observability, and Continuous Delivery. These are exactly the core competencies of the specialized and agile cells of Swiss Digital Network. Therefore, this partnership stands up and will allow us to drive far more business impact for our clients and any other Swiss organizations”.*

*“Partnering with Kosli will allow our customers for Effective Continuous Verification and ML-driven Testing to leverage their Test Data assets and integrate them into continuous and reliable DevOps pipelines for our*

clients” said Thomas Riedel, Co-founder of DigitalQ, the Continuous Verification expert cell of Swiss Digital Network.

*“Together, we will unlock the full potential of smart automation capabilities to embed Continuous Verification Engineering into an Effective Framework and place our clients on a robust and sustainable digital highway in this new and fast-changing digital business landscape.”*

## About Kosli

*Kosli is a DevOps change management platform founded in Norway in 2019. It was created by DevOps consultants who could see that software teams in regulated industries were relying on manual change approvals, ticketing systems, and change advisory board (CAB) meetings, and needed a change management automation tool to help them deploy faster and safer.*

*Kosli records all of the changes that happen in your runtime environments and in your CI/CD pipelines. It integrates with your existing tools and gathers all of the evidence you need to automate change controls for safe, secure, compliant deployments to production. That same evidence can be used to pass audits without any manual digging in logs and dashboards.*

*Companies who use Kosli have considerably faster and more trustworthy compliance reporting, have happier engineers who are free from manual change approvals, and are able to significantly increase their deployment frequency. It is relied upon by DevOps teams in highly regulated industries like finance and healthcare.*

*Kosli is backed by Heavybit Industries (Snyk, LaunchDarkly, Netlify, Stripe). They are committed to security and compliance and achieved SOC2 Type 2 status earlier this year.*

## About Swiss Digital Network

*Swiss Digital Network is the first independent and open Consulting Network composed of agile and specialized Consulting Cells that partner with innovative technology providers to enable the Digital Transformation Journey.*

*Swiss Digital network assists teams and organizations in succeeding in their Digital Transformation by democratizing essential capabilities such as SRE, MLOps, Culture Transformation, & Innovation Management.*

*Swiss Digital network agile and self-managed entities called “Cells” consist of polyvalent teams combining Senior Consultants, Solutions Architects, talented SRE and MLOps Engineers, and experienced Academic Partners and Trainers.*

*Swiss Digital Network has quickly become the preferred partner of major Swiss Organisations when it comes to AI-powered SRE, Continuous Delivery, and Observability.*

*Swiss Digital Network acts as a federal organisation with self-managed units to foster agility and people-centricity. It is driven by value-add and sustainable entrepreneurship, considering social and ecological values in addition to the obvious economic KPIs.*
